DETAILED ACTION

1. The amendment filed on January 13, 2002 has been entered.

Allowable Subject Matter

2. The instant application is deemed to be directed to a nonobvious improvement over the invention of Getts in patent application publication (US 2002/0051981 A1 May 2, 2002). The improvement comprises the use of RNA sample directly in the method for determining the presence of a specific nucleotide sequence in an RNA reagent **without** the step of converting to cDNA prior to hybridization. Another improvement comprises a poly A tail serving as a common capture sequence in the methods of the present invention. These improvements provide an advancement in gene expression detection microarrays by significantly reducing the complexity and labor required to prepare the gene samples.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

SUMMARY

3. Claims 1-56 are allowed.
